

Common Refuge Planting Options (Corn Growing Areas)

The refuge can be Roundup Ready® Corn 2 or conventional corn, but not as a hybrid containing *B.t.* technology. The common refuge options offer flexibility on each farm by combining the corn borer and corn rootworm refuges into one effective corn refuge to incorporate IRM into farm operations. Options include:

- Plant a corn refuge adjacent to each corn field.
- Plant a corn refuge as blocks within a field.
- Split the planter to alternate at least four consecutive rows of corn refuge.
- Plant field perimeters or end rows to a corn refuge.

Roundup Ready® Corn 2 is a trademark of Monsanto Technology LLC.
