

Dear Fellow Farmers,

As owner of an independent seed company, I take pride in the fact that I am only a phone call away from you, the customer. It is important to me that you are satisfied with the products that I provide. Independence allows Tracy Seeds to offer a vast range of genetics and traits. I consider all our customers a part of the Tracy Seeds family and invite you to visit our office anytime.

OUR MISSION

To provide high quality products and exceptional service at a fair price.

OUR HISTORY

Tracy and Son Farms, Inc started in 1935 near Madison, Wisconsin on 3.5 acres that produced 138 bushel hybrid seed corn. In 1938 Robert Tracy moved his operation to Rock County renting 560 acres. Currently Tracy and Son Farms owns and operates 2,500 acres.

Tracy Seeds resumed seed sales in 2005 and is owned by Robert's grandson Josh Tracy. Josh is the fourth generation in the seed business and is now joined by his son Colin; the fifth generation at Tracy Seeds. We are dedicated to providing our customers with the highest quality of hand selected corn, soybeans, wheat, alfalfa, and oat varieties. Your success is our success and is our main focus, "Let's Grow Together."

Tracy Seeds has transformed from a contract conditioner to marketing the Tracy's brand in seed corn and soybeans. We treat a variety of products; ask us about custom treating and packaging.

Tracys Corn Technologies

Agrisure Artesian	Agrisure Artesian® technology maximizes yield when it rains and increases yield when it doesn't. Built for top-end yield using scientifically selected genes, this elite class of high-performing hybrids can respond to water stress with multiple genes at virtually any stage of growth—managing gaps in rainfall throughout the season. Artesian™ corn hybrids can respond to the unpredictability of weather and improve yield consistency by converting water to grain more efficiently than other hybrids.
✓ Agrisur € GT	The Agrisure® GT trait provides tolerance to in-crop applications of glyphosatebased herbicides. This hybrid is an excellent option for refuge acres in a structured refuge operation.
Agrisure Artesian GTA	The Agrisure Artesian® GTA trait stack brings together an elite hybrid, which converts water to grain more efficiently than other hybrids, with tolerance to in-crop applications of glyphosate-based herbicides—resulting in season-long water optimization, and more consistent production and profit potential. This hybrid is an excellent option for refuge acres in a structured refuge field.
Agrisure LIBERTY 3000GT LINK	The Agrisure® 3000GT trait stack offers control of corn borer and corn rootworm with tolerance to both glyphosate and glufosinate herbicides.
Agrisure LIBERTY 3010	The Agrisure® 3010 trait stack provides corn borer control with both glyphosate and glufosinate tolerance.
Agrisure LIBERTY LINK W	The Agrisure Artesian® 3011A trait stack brings together an elite hybrid that maximizes yield when it rains and increases yield when it doesn't with better control of damaging corn insects and herbicide flexibility. The Agrisure Artesian 3011A trait stack provides improved yield consistency by converting water to grain more efficiently than other hybrids, control of corn borer and corn rootworm, and tolerance to both glyphosate and glufosinate based herbicides.
Agrisure LIBERTY LINK W	The Agrisure Viptera® 3110 trait stack offers season-long comprehensive above-ground insect control. It is ideal in areas where corn rootworm management is not a primary concern. Featuring the Agrisure Viptera trait, which is the only trait available today that effectively controls western bean cutworm, the Agrisure Viptera 3110 trait stack controls ear-feeding insects and protects genetic yield potential.
Agrisure LIBERTY LINK W	The Agrisure Viptera® 3110A trait stack combines an Agrisure Artesian® hybrid that converts water to grain more efficiently than other hybrids with season-long comprehensive above-ground insect control. It is ideal where corn rootworm management is not a primary concern. Featuring the Agrisure Viptera trait, which is the only trait available today that effectively controls western bean cutworm, the Agrisure Viptera 3110A trait stack controls ear-feeding insects and protects genetic yield potential.
POWERCURE	PowerCore® trait technology delivers superior control of above-ground insects in corn.

X	Agris	ure ₽	∤ bov∈

Previously: Agrisure Viptera® 3120 E-Z Refuge, Agrisure Artesian 3120A E-Z Refuge

The **Agrisure® Above** trait stack offers the convenience of an integrated E-Z Refuge® seed blend featuring multiple modes of action against corn borer, as well as suppression of ear-feeding insects. The Agrisure® Above trait stack is ideal in areas where corn rootworm management is not a primary concern.

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium based herbicides.

Previously: Agrisure Duracade® 5122 E-Z Refuge, Agrisure Duracade® 5122A E-Z Refuge

The Duracade™ trait stack provides multiple modes of action against corn rootworm and corn borer, as well as suppression of ear-feeding insects. This trait stack includes a novel, alternate mode of action to help preserve trait durability and delay insect adaptation for long-term field health, and the convenience of an integrated E-Z Refuge® seed blend.

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammoniumbased herbicides.

Previously: Agrisure Duracade® 5222 E-Z Refuge

The **DuracadeViptera™** trait stack is the industry's most comprehensive solution for proactively protecting yield potential and field health. It has the power traits to control 16 damaging above- and below-ground pests, more than any competitive trait stack, while offering the convenience of an integrated E-Z Refuge® seed blend. Its novel, alternate modes of action, including a unique mode of action that demonstrates strong performance against corn rootworm, help preserve trait durability and delay insect adaptation for long-term field health.

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium based herbicides.

Previously: Agrisure Viptera® 3220 E-Z Refuge

The **Viptera™** trait stack offers the most comprehensive above-ground insect control with control of ear-feeding insects, multiple modes of action against key aboveground insects and the convenience of an integrated E-Z Refuge® seed blend. It is ideal in areas where corn rootworm management is not a primary concern. Featuring the Viptera™ trait, which is the only trait available today that effectively controls western bean cutworm, the Viptera™ trait stack helps protect genetic yield potential.

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium based herbicides.

Previously: Agrisure Viptera® 3330 E-Z Refuge

The **Viptera™Z3** trait stack offers the most comprehensive above-ground insect control, with three modes of action on key broad lepidopteran pests and three modes of action on corn borer. It reduces the need for scouting and treatments and is a good fit for geographies where corn rootworm is not a concern. Featuring the Viptera™ trait, which is the only trait available today that effectively controls western bean cutworm, the Viptera™Z3 trait stack helps protect genetic yield potential and includes the convenience of an integrated E-Z Refuge® seed blend.

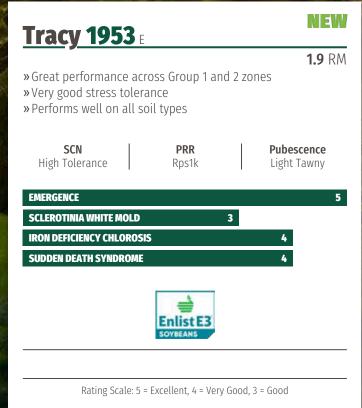

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium based herbicides.

A CLOSER LOOK

AT THE ENLIST® WEED CONTROL SYSTEM

2,4-D choline | Glyphosate | Glufosinate

Following burndown, Enlist Duo® and Enlist One® herbicides with Colex-D® technology are the only herbicides containing 2,4-D that are labeled for preemergence and postemergence use with Enlist E3® soybeans.

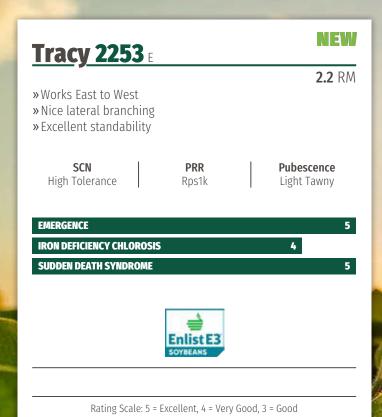

- Convenient proprietary blend of 2,4-D choline and alyphosate
- · The two modes of action work together to deliver control of yieldrobbing weeds and help prevent resistance

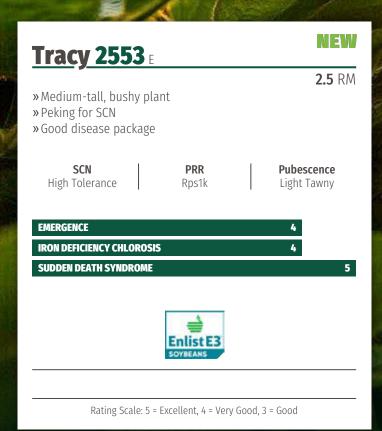

- HEDRICIDE
- Straight goods 2,4-D choline with additional tank-mix flexibility
- Provides additional tank-mix flexibility with Durango® DMA® herbicide, Liberty® herbicide and other qualified tankmix products, allowing for a customized weed control program to fit each farm

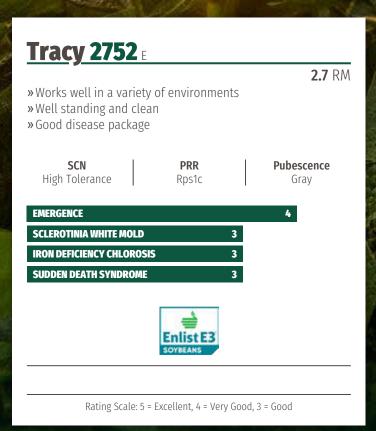

On-Target Application

- 90% less drift than traditional 2,4-D
- 96% less volatile than 2,4-D ester

Soybean Technologies

GLYPHOSATE

GLYPHOSATE TOLERANT (GT) soybeans offer great yield potential with the ease of herbicide tolerance. If you are looking for a soybean that can give you the best return on investment look no further than Partners Brand GT soybean lineup. These varieties have proven genetics that can handle not only a wide variety of soil types and stressful environments but also have stood the test of time season after season. With yields that compete side by side with the newest genetics on the market, Glyphosate Tolerant soybeans can be your answer to being more profitable on every acre.

LIBERTYLINK® GT27® (GTLL) Created with high-yielding elite genetics, LibertyLink® GT27® soybeans gives growers exceptional performance coupled with outstanding weed control. LibertyLink GT27 soybeans are the first soybean technology enabling both Liberty® and glyphosate use over the top. And now, in select counties in certain states, Alite 27 herbicide adds another effective pre-emergent residual mode of action to the LibertyLink GT27 system. It is the first HPPD herbicide available for soybeans.

ENLIST E3® (E3) soybeans offer the most advanced trait technology available in soybeans, providing a new standard for weed control and yield performance. With Enlist E3® soybeans, the three herbicide tolerances - 2,4-D choline, glyphosate and glufosinate - combine to deliver a complete system with more weed control options. Using multiple herbicide sites of action in a program approach helps control weeds in the current growing season while limiting the ability for herbicide-resistant weeds to develop. Enlist E3® soybeans give farmers the flexibility to employ multiple herbicide sites of action.

TSA 200

- » Medium recovery after harvest
- » Great for economy production
- » Better for 3 or 4 cuttings per year
- » Used for short rotations
- » Keep on well-drained soils

Fall Dormancy	3.0-4.0
Winter Hardiness	2.0
Persistence	Average
Disease Rating (WI)	26/30
Cutting Recovery	Average

TSA 230-PLH

- » First choice where Potato Leafhopper is a pest or not sprayed
- » Eliminates need to spray for Potato Leafhopper
- » Naturally high forage quality potential
- » Manage for 3 or 4 cuttings per year
- » Medium rotation cycle

Fall Dormancy	4.0
Winter Hardiness	2.0
Persistence	Very Good
Disease Rating (WI)	30/30
Cutting Recovery	Fast

TSA 250-ML

- » High yield, high quality, multi-leaf
- » Adapted for 3, 4, or 5 cuttings per year
- » Selected for good forage quality, yield, and persistence potential
- » Medium to long rotation cycle

Fall Dormancy	4.0
Winter Hardiness	2.0
Persistence	Superior
Disease Rating (WI)	30/30
Cutting Recovery	Very Fast

TSA 280-APH2

- » First choice where Aphanomyces Race 2 is a problem
- » Elite performance for yield potential, quality, and persistence
- » Widely adapted to soils and geography
- » Manage for 3, 4, or 5 cuttings per year

Fall Dormancy	4.0
Winter Hardiness	2.0
Persistence	Superior
Disease Rating (WI)	30/30
Cutting Recovery	Very Fast

Alforex Hi-Gest® 360

- » High yield potential with improved fiber digestibility
- » Better quality for top performing dairies; 3 or 4+ cuttings per year
- » Conventional bred plant offering wider harvest window and improved performance
- » Very leafy, medium to fine stems while maintaining solid standability

Fall Dormancy	3.0
Winter Hardiness	1.5
Persistence	Excellent
Disease Rating (WI)	35/35
Cutting Recovery	Average

Alforex Hi-Gest® 460

- » High yield alfalfa bred for improved yield and forage quality
- » Better quality for top performing dairies; 3, 4, or 5 cuttings per year
- »Adapted for aggressive, high quality production or more relaxed high yield practices
- » Strong leaf disease package which contributes to a high leaf-to-stem ratio and higher crude protein

Fall Dormancy	4.0
Winter Hardiness	1.5
Persistence	Excellent
Disease Rating (WI)	34/35
Cutting Recovery	Fast

LIBERTY More information about Duracade™ is available at www.biotradestatus.com.

LINK 🦭 Seed products with the LibertyLink® (LL) trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yielding genetics with the powerful, non-selective, postemergent weed control of Liberty® herbicide for optimum yield and excellent weed control. LibertyLink®, Liberty® and the Water Droplet logo are registered trademarks of BASF.

Corn trait technology incorporated into these seeds is commercialized under license from Syngenta Seeds, LLC. Herculex® Technology incorporated into these seeds is commercialized under license from Corteva Agriscience, LLC. HERCULEX® and the HERCULEX Shield are trademarks of Corteva Agriscience, LLC.

Seeds containing the LibertyLink® trait may be protected under one or more U.S. patents and may be planted only to produce one (1) commercial crop in a single season, and only after signing a BASF Grower Technology Agreement. It is illegal to save seeds containing the LibertyLink trait for use as planting seed or for transfer to others for use as planting seed.

Always read and follow label instructions. ILEVO, InVigor, Liberty, LibertyLink, Poncho, Votivo, and the Water Droplet Design are registered trademarks of BASF. Not all products are registered for use in all states. ©2021 BASF Corporation. All Rights Reserved.

Seeds containing the LibertyLink® trait may be protected under one or more U.S. patents and may be planted only to produce one (1) commercial crop in a single season, and only after signing a BASF Grower Technology Agreement. It is illegal to save seeds containing the LibertyLink trait for use as planting seed or for transfer to others for use as planting seed.

LIBERTYLINK LibertyLink® GT27® soybeans offer triple stack tolerance to Liberty, glyphosate, and, in select counties specified on the label, the first HPPD based herbicide for soybeans— Alite™ 27. Other HPPD herbicides not labeled for use with LibertyLink GT27 or isoxaflutole-resistant soybeans may cause significant crop injury. Alite 27 herbicide is only available for use in labeled counties.

Always read and follow label directions. Alite 27 is a restricted use herbicide. Alite, Liberty, and LibertyLink are registered trademarks of BASF. GT27 is a registered trademark of M.S. Technologies, L.L.C. MS Technologies is a trademark of M.S. Technologies, L.L.C. ©2020 BASF Corporation / M.S. Technologies, L.L.C. All Rights Reserved. APN 20-INT-0014

LibertyLink GT27 is not tolerant to all HPPD herbicides. Alite™27 herbicide from BASF is the first HPPD herbicide for use on GT27 and LibertyLink GT27 soybeans is currently available in select counties in certain states.

 $Patent\ information\ at\ www. Soybean Germplasm Patent.com.$

Seeds containing the Enlist, Herculex and PowerCore traits are protected under numerous US patents. Seeds containing patented traits can only be used to plant a single commercial crop and cannot be saved or replanted. You acknowledge and agree to be bound by the terms and conditions of the following documents in effect at the time of planting of this seed: (i) the Technology Use Agreement and (ii) the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use requirements detailed therein (www.corteva.us/Resources/trait-stewardship.html). To plant Enlist, Herculex and PowerCore seed, you must have a limited license from Corteva Agriscience (or other appropriate affiliates). In consideration of the foregoing, Corteva Agriscience grants to the Grower the limited license to use its technology to produce only a single commercial crop in the United States under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed. Always read and follow herbicide label directions prior to use: Enlist® products contain the Enlist trait that provides crop safety for use of labeled over-the-top applications of glyphosate, glufosinate and 2,4-D herbicides featuring Colex-D® technology when applied according to label directions. Following burndown, the only 2,4-D containing herbicide products that may be used with Enlist® crops are products that feature Colex-D technology and are expressly labeled for use on Enlist crops. 2,4-D products that do not contain Colex-D technology are not authorized for use in conjunction with Enlist products. Enlist corn contains genes that confer tolerance to 2,4-D and -fop herbicides. 2,4-D and -fop herbicides will damage or kill crops that are not tolerant

Enlist E3® soybean seeds containing the Enlist® trait can only be used to plant a single commercial crop. It is unlawful to save and replant Enlist E3® soybeans. Additional information and limitations on the use of these products are provided in the Corteva Agriscience Technology Use Agreement and Enlist® Soybean Product Use Guide. U.S. patents for Dow AgroSciences technologies can be found at the following webpage: www.corteva.us/Resources/trait-stewardship.html.

Corteva Agriscience is a member of Excellence Through Stewardship® (ETS). Corteva Agriscience products are commercialized in accordance with ETS product launch stewardship guidance and Corteva Agriscience Product Launch Stewardship Policy. No crop or material produced from this product can be exported to, used, processed or sold across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. For further information about your crop or grain marketing options, contact DAS at 877-4-TRAITS (877-487- 2487). Information regarding the regulatory and market status of agricultural biotechnology products can be found at: www.biotradestatus.com.

Properly managing trait technology is key to preserving it as a long term crop protection tool. Growers who fail to comply with IRM requirements risk losing access to this product. To help preserve the effectiveness of B.t. corn technologies, growers planting B.t. corn technologies are required to follow an IRM Plan. Consult the Corn Product Use Guide for appropriate refuge configuration options. Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, including applicable refuge requirements for insect resistance management, for the biotechnology traits expressed in the seed as set forth in the Technology Use Agreement and

Product Use Guide. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements. For complete details on IRM requirements for hybrids with Bt technology, including refuge examples and important information on the use of insecticides on refuge and Bt corn acres, please consult appropriate Product Use Guide. Go to www.corteva.us/Resources/trait-stewardship.html to download the latest Corteva Agriscience Corn Product Use Guide.

The transgenic soybeans event in Enlist E3® soybeans is jointly developed and owned by Corteva Agriscience and M.S.
